# Inside Refinery

apache2 web requests

PostgreSQL persistent data

Django web framework

solr indexing

Python programming language

neo4j graph database

Celery scheduling

rabbitmq messaging

nodejs programming language

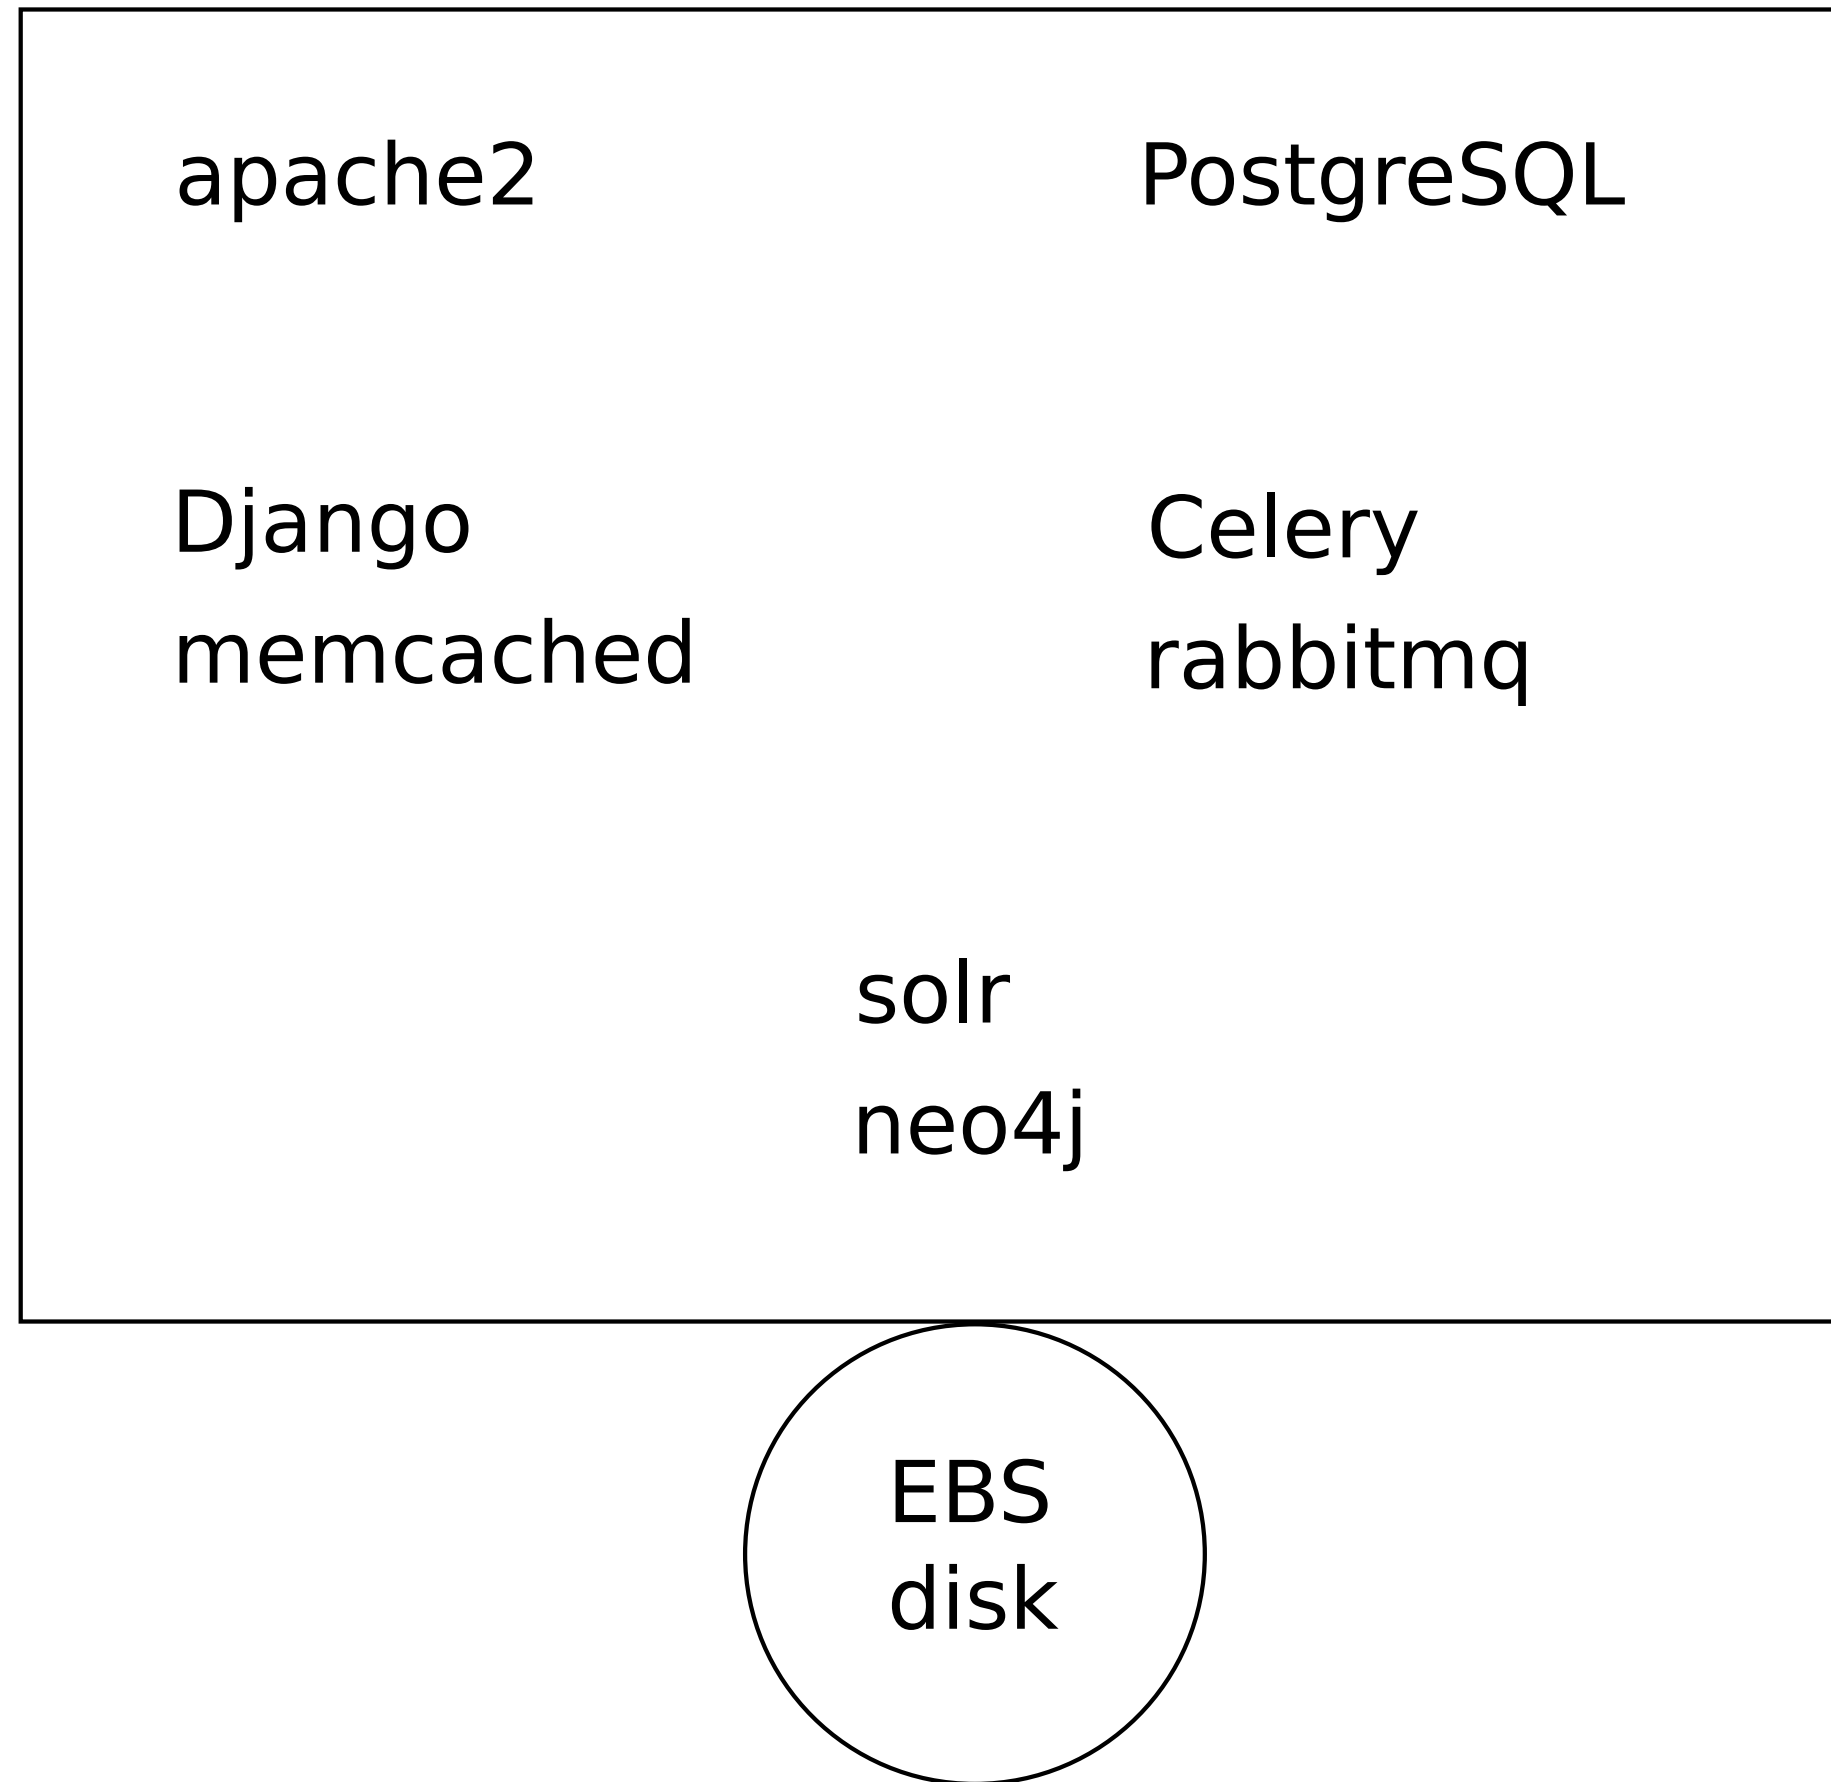

memcached caching

Angular frontend

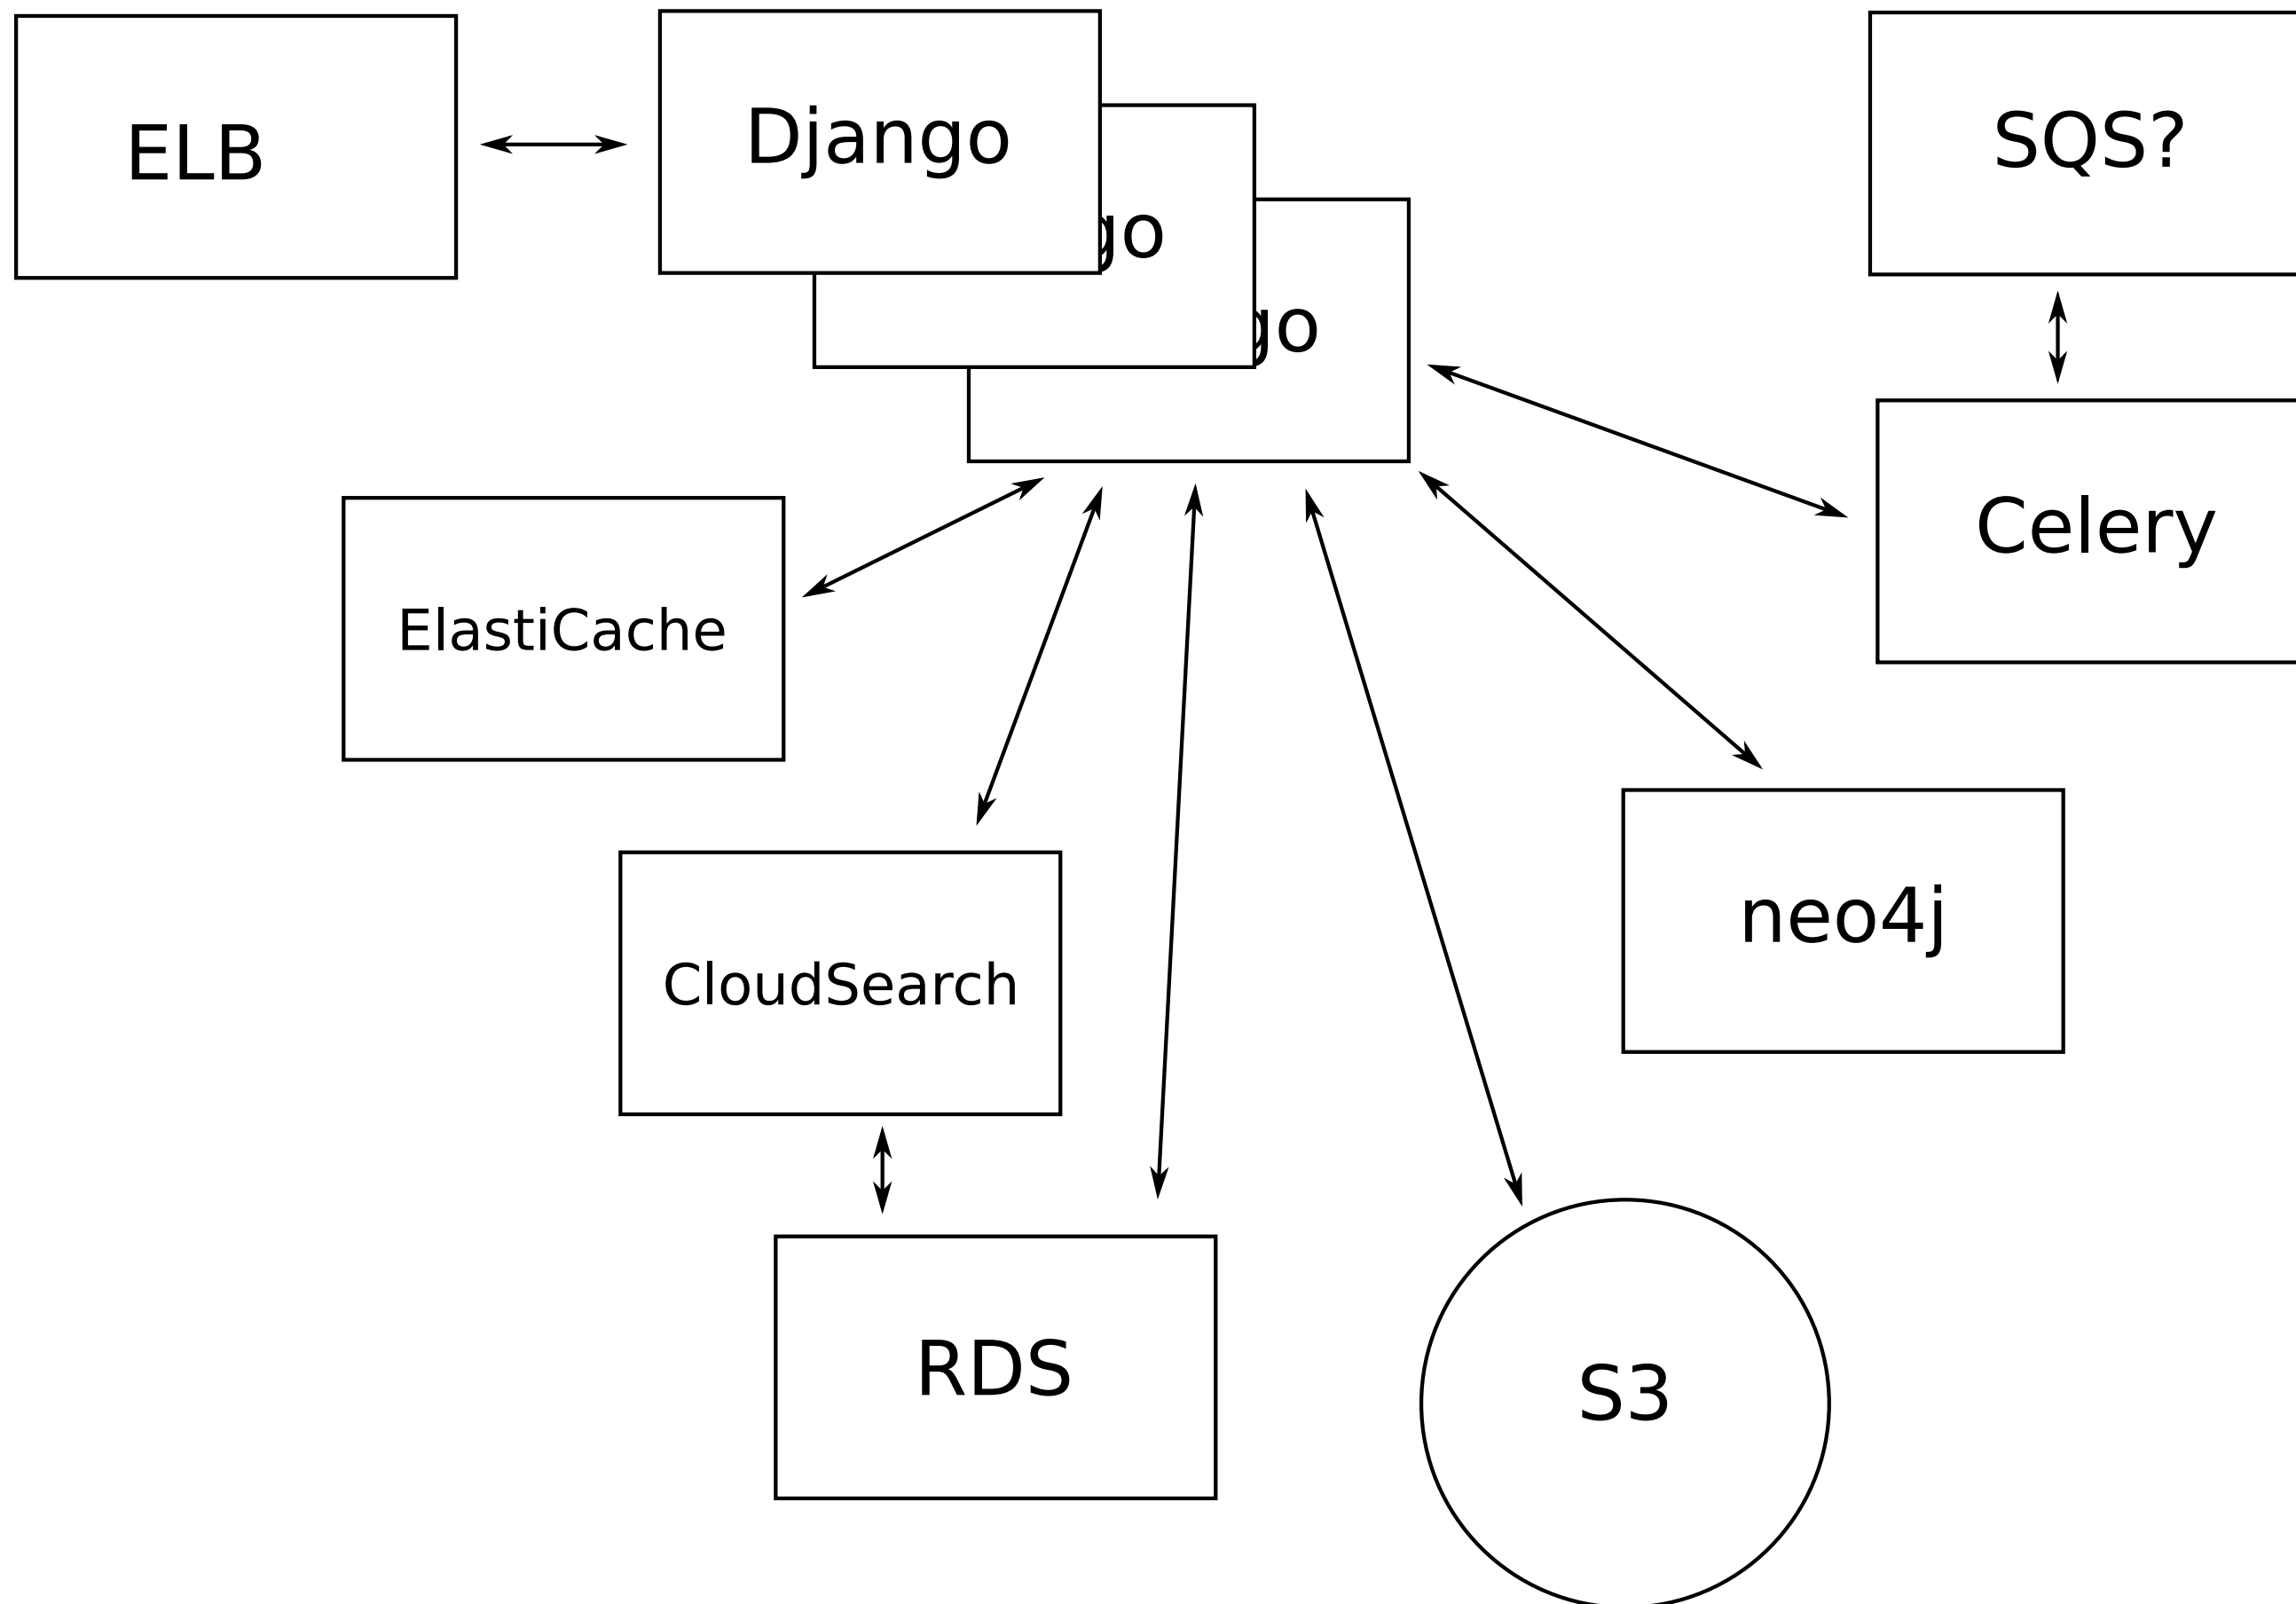

supervisord system services

JavaScript programming language

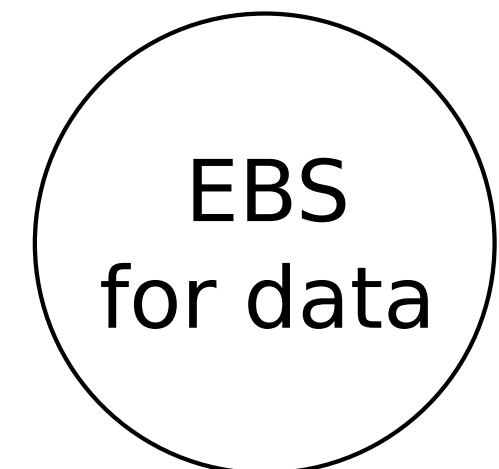

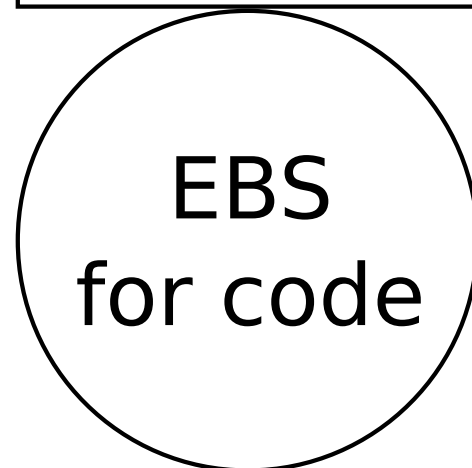

# On Amazon

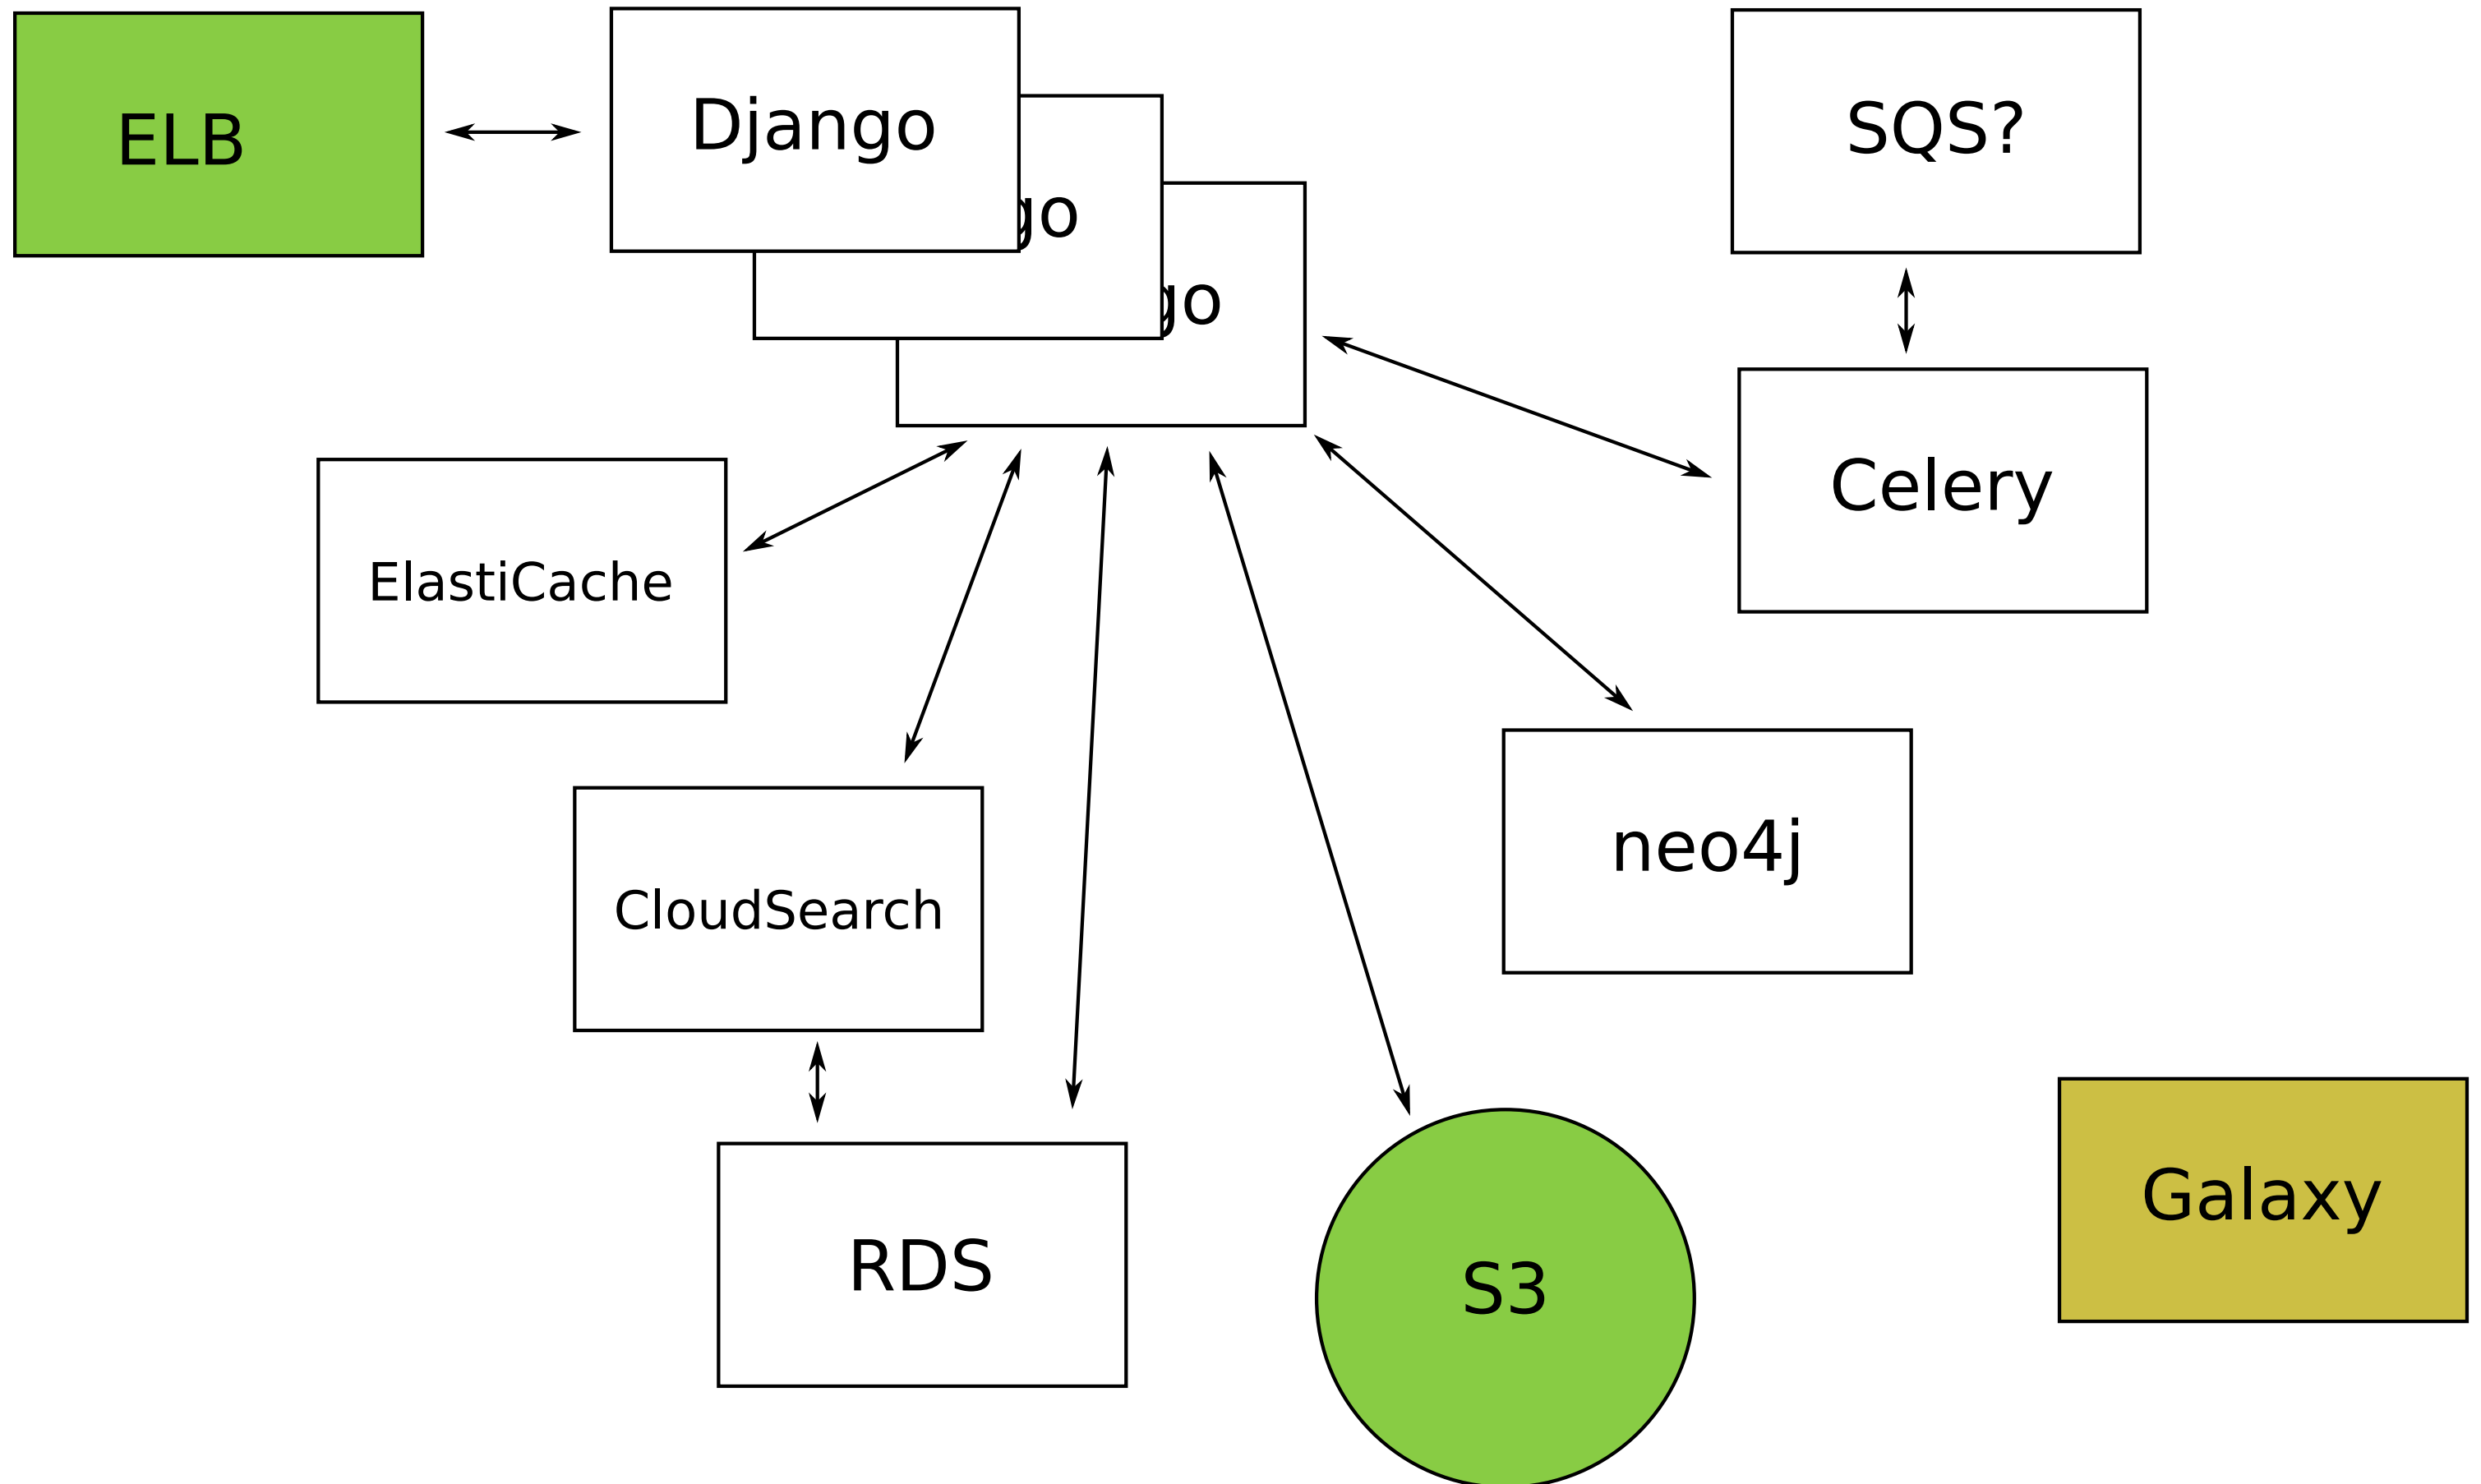

# Amazon ∞

# Amazon Minimal

# Amazon Priority

# Risks

S3 - shuttling data in and out (and encrypting?) without losing it

Galaxy - reliable cloud burst

Backups - need to work even when managed by a bioinformatician

Monitoring - reliably tell when a Galaxy job has finished/failed
